## PROFESSIONAL SUMMARY

**Bachelor of Science** in Computer Science graduate, **Summa Cum Laude**, and **CompTIA Security+** certified software engineer with experience building full-stack products from **0 to 1** across **government and startup environments**. Experienced in owning outcomes end-to-end, from stakeholder discovery and problem framing through architecture, development, deployment, and production support. Skilled in **C#, .NET, React, TypeScript, SQL Server, REST APIs**, and **Microsoft ecosystem** technologies, with hands-on experience using AI-assisted development and **LLM** application patterns, including **MCP, tool orchestration, prompt design**, and evaluation. Built and scaled production software supporting **10,000+ users** while **delivering secure solutions within complex business, security, and compliance constraints**.

## CORE SKILLS

**Product Engineering:** 0-to-1 Development, Stakeholder Discovery, Problem Framing, Outcome Ownership, Product Strategy

**Frontend:** React, TypeScript, JavaScript, Redux, Responsive UI Design

**Backend & APIs:** C#, .NET Core, ASP.NET Core, Node.js/Express, RESTful API Design, API Integration

**Database & Data:** SQL Server, T-SQL, Firebase/Firestore, NoSQL

**AI & LLM:** AI-Assisted Development, MCP, LLM Application Development, Prompt Design, Tool/Agent Orchestration

**Microsoft & Enterprise:** Azure, Azure DevOps, Dynamics/Dataverse, M365, SSO/AD, Windows Authentication, CAC, RBAC

**Engineering & DevOps:** Git, Pull Requests, Peer Review, CI/CD, GitLab, IIS, SAST, Dependency Scanning, Secure SDLC

**Languages:** C#, C, C++, JavaScript, TypeScript, Python, Dart, Java

## EDUCATION

**University of Illinois at Chicago**, *Bachelor of Science in Computer Science*

- Honors: Summa Cum Laude, GPA: 3.92/4.0

## PROFESSIONAL EXPERIENCE

**Software Developer**, *Defense Language Institute Foreign Language Center*

Aug 2024 – present

- **Owned full-stack products from discovery through production**, working directly with government stakeholders to understand operational workflows, identify pain points, define requirements, and **translate business needs** into working **C#/.NET, API, and SQL** solutions.
- **Led 0-to-1 development and solution design** for internal applications, evaluating competing approaches against user needs, technical feasibility, **security requirements**, and long-term maintainability rather than simply implementing assigned tickets.
- **Built** and integrated applications with **enterprise systems of record and organizational data sources**, designing **REST APIs**, relational data models, and governed data workflows within a **Microsoft-aligned** environment including **Azure, Azure DevOps, Dynamics/Dataverse, M365, AD, and .NET**.
- **Designed** and implemented **SSO/AD-based identity and custom CAC authentication**, including authorization and **RBAC workflows**; navigated **certificate validation, directory integration**, security controls, and compliance gates.
- **Implemented CI/CD GitLab pipelines** covering build, testing, dependency scanning, **SAST scanning**, and **IIS deployments across DEV/STAGING/PROD environments**.
- **Optimized** production **data workflows** and application performance, improving **SQL query performance ~25%** through indexing, normalization, and **query tuning** while balancing performance, data integrity, and **maintainability**.
- **Collaborated** cross-functionally with **QA, Security, and DevOps teams** to deliver **secure, compliant** applications in a highly regulated environment.
- **Translated** complex business workflows into maintainable software and **architecture documentation**
- **Conducted stakeholder discovery** to **identify user needs** and workflow pain points, translating findings into requirements and working features.

**Lead Software Developer** @ *Gyfr*

Jun 2024 – Feb 2025

- **Owned technical and product delivery from 0-to-1**, translating business and user needs into working product capabilities across the frontend, backend, data, payments, scheduling, and production infrastructure.
- **Designed** and shipped a **scalable Node.js/TypeScript/Express API** supporting core customer workflows including sessions, subscriptions, payments, and trainer/client management as the platform grew to **10,000+ users**.
- **Developed modular** frontend/backend architecture across **50+ API routes**, centralizing **React/Redux/Axios** integrations and separating client, trainer, session, and subscription domains to reduce duplication and enable faster feature development.
- **Worked** across technical and product concerns rather than operating as a ticket executor, **shipping working capabilities, learning from real usage**, and **iterating the platform around customer and business needs**.

## PROJECTS

**No2SQL | C# | .NET Core | AI Developer Tooling**

- **Built** a **C# MCP server and NuGet package** using **AI-assisted development** to automate **MongoDB-to-SQL schema** discovery, relationship inference, and migration generation.
- **Designed LLM application workflows and an MCP server** with prompt-driven schema discovery and **tool orchestration**, exposing **MCP capabilities** to **GitHub Copilot, VS Code, and Claude Desktop**.
- **Developed a relationship inference engine** that analyzes dynamic **JSON** documents to discover **cross-collection relationships**, **normalize** data models, and generate deterministic **SQL** schemas.
- **Developed** a deterministic **SQL** generation pipeline that creates **migration-ready DDL, SQL seed data**, foreign key constraints, and ER diagrams.
- **Developed tooling** to automate data **migration** between **NoSQL and relational databases** by generating normalized schemas, **DDL scripts, foreign keys, and migration-ready SQL**.
